

## Subject Index: CIT Vol. 28 (2020), N° 1–4

---

- affective computing, (2) 125–146  
 agile software development, (1) 33–58  
 ARI, (4) 255–267  
 artificial neural network (ANN), (2) 111–123, (3) 207–223  
 audit risks, (3) 207–223  
  
 biconnected graphs, (4) 225–240  
  
 citation recommendation, (3) 183–205  
 class imbalance, (4) 269–285  
 classification, (3) 165–181  
 classification algorithms, (4) 269–285  
 clustering, (1) 19–31  
 cooperative games, (2) 79–87  
 cost allocation, (2) 79–87  
 customer collaboration, (1) 33–58  
  
 deep learning, (3) 183–205  
 diameter cycle, (4) 225–240  
 display defects, (4) 241–254  
 Doc2Vec, (1) 19–31  
 DOM, (1) 19–31  
 DTW with limited width, (4) 255–267  
  
 emotional HRI challenges, (2) 125–146  
 engineering, (1) 33–58  
 evaluation methods, (3) 147–164  
  
 fault localization, (2) 101–109  
 feature selection, (3) 165–181  
 financial statement, (3) 207–223  
 finite automaton, (2) 89–100  
 fraud detection, (4) 269–285  
 function call path, (2) 101–109  
 fundamental cycles, (4) 225–240  
  
 generic model, (2) 111–123  
 graph algorithms, (4) 225–240  
  
 health insurance, (4) 269–285  
 hierarchical clustering, (4) 255–267  
 hybrid genetic simulated annealing algorithm, (2) 101–109  
  
 index, (1) 1–17  
 insertion heuristics, (1) 59–72  
 intelligent software, (3) 147–164  
 intrusion tolerance, (2) 89–100  
  
 k-means, (4) 269–285  
 Korean language, (3) 165–181  
  
 machine learning, (3) 165–181  
 machine learning, (3) 183–205  
 Markov, (2) 89–100  
 mathematical programming, (2) 79–87  
 multi-agent systems, (1) 59–72  
  
 natural language processing, (3) 183–205  
 network security, (2) 89–100  
 networks, (2) 79–87  
 nonlinear system identification (NSI), (2) 111–123  
  
 online similarity search, (1) 1–17  
  
 particle swarm optimization (PSO), (2) 111–123  
 PCA, (3) 165–181  
 phishing detection, (1) 19–31  
  
 requirements, (1) 33–58  
 requirements prioritization, (1) 33–58  
 ResNet34, (4) 241–254  
  
 scientific articles, (3) 183–205  
 scientific text processing, (3) 183–205  
 security requirements, (1) 33–58  
 semantic similarity, (1) 19–31  
 smart meter, (4) 241–254  
 SMOTE, (4) 269–285  
 social robotics, (2) 125–146  
 software reliability, (3) 147–164  
  
 test framework, (3) 147–164  
 test methods, (3) 147–164  
 time series, (1) 1–17  
  
 UK-means clustering, (4) 255–267  
 uncertain time series, (4) 255–267  
 uncertainty, (1) 1–17  
  
 vehicle routing problems, (1) 59–72  
  
 WGFS, (3) 165–181  
  
 YOLOv5, (4) 241–254
